🧪 Research Interests and Pursuits

I delve into the intricate realm where structural biology, biophysics, biochemistry, and oncology intersect. My primary focus lies in the captivating field of Structural Oncology, where I strive to capture bioimages of macromolecules intricately involved in the hallmarks of cancer. By unraveling the underlying structural characteristics and molecular intricacies that drive tumorigenesis, I aspire to contribute significantly to our comprehension of cancer's development and progression. To accomplish this, I devote myself to mastering advanced imaging techniques, particularly CryoEM, which enables me to obtain near atomic resolution structures. Through this cutting-edge approach, I aim to illuminate the complex interplay between nutrient-sensing, nutrient-trafficking, and cancer signaling pathways, revealing vital insights into the mechanisms of cancer.

As a master's student with a deep interest in the research topic of CryoET in the context of human biology, I am eager to pursue this area for my PhD training. I am driven by the prospect of capturing high-resolution, three-dimensional views of biological macromolecules using cutting-edge imaging techniques. Collaborating with fellow researchers, I aim to contribute to the advancement of methods in this field, ensuring meticulous examination of intricate biological structures. Recognizing the undeniable value of multidisciplinary collaborations, I actively seek to engage with colleagues from diverse faculties and schools. Through these fruitful collaborations, I substantively contribute to the preparation of scholarly papers, placing particular emphasis on the results section. Moreover, I seize every opportunity to present my ongoing work at esteemed academic conferences, driven by a fervent commitment to disseminate knowledge, ignite scientific curiosity, and foster meaningful scientific discourse.

Ultimately, my overarching objective is to inspire structural oncologists and medicinal chemists alike, providing them with valuable mechanistic insights and paving the way for the development of novel small molecules and efficacious drugs. By targeting a wide array of cancers, including sporadic, infection-related, and familial variants, I aspire to make substantial contributions in the realm of cancer prevention and treatment, combating these devastating diseases through scientific innovation and determination.
