### 🧪 Research Interests and Pursuits

---

I am a graduate student interning in the lab of Principal Investigator Kacper Rogala at the Stanford Cancer Institute, where I focus on making fundamental discoveries in Biomedical Innovations through a Molecular Medicine lens. Specifically, my research is centered on Structural Oncology in the context of capturing bioimages of macromolecules that are involved as a culprit or a hero in hallmarks of cancer such as uncontrolled cell growth due and proliferation leading to oncogenesis. By mechanistically providing insights into nutrient-sensing, nutrient-trafficking, and metabolism-specific tumor suppression pathways, I aim to validate our targets through accurate profiling reconstitution of complexes using CryoEM structures and nanobody discovery. Ultimately, I hope to inspire oncologist and medicinal chemists with novel small molecules and design drugs that can prevent various types of cancers. I am interested in preventing sporadic, congenital, infection-related and hereditary cancers. In addition to my research in cancer science, I also work as a scientist (computational, experimental, and theoretical) and translate my discoveries to the broader disease research community. Challenges include discovering molecules, finding insights in cancer systems biology and designing drugs for cancer neuroscience.
